

ABRL10H Retractable Fall Arrester

10 metres of reliable fall protection with smooth movement, fast locking, and a durable steel wire rope for work at height.

ABRL10H Retractable Fall Arrester is designed for vertical fall protection where extended working reach is required. It features a 10 m retractable 4.8 mm galvanised steel wire rope that extends and retracts smoothly, keeping the line under light tension to reduce slack during use. In the event of a fall, the internal speed-sensing braking system locks immediately to arrest the fall and help reduce the forces applied to the user.

- 10 m working length gives greater freedom while keeping the lifeline under constant tension.
- Integrated swivel and automatic locking system support smooth movement and dependable fall arrest.
- Steel wire rope construction is suited for demanding industrial environments.

Product Code:	ABRL10H
Conformance:	EN 360
Line Material:	4.8mm Galvanised Steel
Housing Material:	High-strength polymer
Connector:	EN 362 Steel
Max User Weight:	140kg
Breaking Strength:	12 kN
Service Interval:	12 months
