

RP500 Rocker

The Rucker can be fitted to the rope at any point. It can be used hands-free, when travelling up and down the rope. The Rucker has been designed for use without a Shock absorber.

The Rucker can also be used as a Rope Adjuster on a Work Positioning Lanyard or Flip-line (in accordance with EN358).

The Rucker is a self-tailing device, but the Thumb-catch can be used to park the device on the rope, for work positioning or use as a Rope Access backup device.

The Rucker is fitted with non-aggressive 'rope friendly' cam faces.
